INTRODUCTION

This is an updated edition of the 1990 booklet of the same name[†].

This booklet presents selected properties of all known nuclides and their known isomeric states.

The data given here are taken mostly from the adopted properties of the various nuclides as given in the *Evaluated Nuclear Structure Data File* (ENSDF)[1]. The data in ENSDF are based on experimental results and are published in *Nuclear Data Sheets*[2] for $A \geq 45$ and in *Nuclear Physics*[3,4] for $A < 45$. For nuclides for which either there are no data in ENSDF or those data have since been superseded, the half-life and the decay modes are taken either from recent literature[5] or from other sources[e.g., 6,7,8]. The ground-state mass excesses are from the mass adjustments by G. Audi and A. H. Wapstra[9]. The isotopic abundances are those of N. E. Holden[10].

For other references, experimental data, and information on the data measurements, please refer to the original evaluations [1–4]. The data[1] were updated to **June 30, 1995**.

[†]The first *Nuclear Wallet Cards* was produced by F. Ajzenberg-Selove and C. L. Busch in 1971. The Isotopes Project, Lawrence Berkeley National Laboratory, produced the next edition in 1979 based upon the *Table of Isotopes*, 7th edition (1978)[12]. The third (1985) and the fourth (1990) editions were published by J. K. Tuli, National Nuclear Data Center, Brookhaven National Laboratory.

Explanation of Table

Column 1, Isotope (Z, El, A):

Nuclides are listed in order of increasing atomic number (Z), and are subordered by increasing mass number (A). All isotopic species are included as well as all isomers with half-life ≥ 0.1 s, and some other isomers which decay by SF or α emissions. A nuclide is included even if only its mass estimate or its production cross section is available. For the latter nuclides $T_{1/2}$ limit is given[8].

Isomeric states are denoted by the symbol "m" after the mass number and are given in the order of increasing excitation energy.

The ^{235}U thermal fission products, with fractional cumulative yields $\geq 10^{-6}$, are *italicized* in the table. The information on fission products is taken from the ENDF/B-VI fission products file[11].

The names for elements Z=104–109 are those adopted by the American Chemical Society Nomenclature Committee. The symbols Rf (Rutherfordium) and Ha (Hahnium) have, not been accepted internationally due to conflicting claims about the discovery of these elements.

Column 2, $J\pi$:

Spin and parity assignments, without and with parentheses, are based upon strong and weak arguments, respectively. See the introductory pages of any January issue of *Nuclear Data Sheets*[2] for description of strong and weak arguments for $J\pi$ assignments.

Explanation of Table (cont.)

Column 3, Mass Excess, Δ :

Mass excesses, $M-A$, are given in MeV with $\Delta(^{12}\text{C})=0$, by definition. For isomers the values are obtained by adding the excitation energy to the $\Delta(\text{g.s.})$ values. Wherever the excitation energy is not known, the mass excess for the next lower isomer (or g.s.) is given. The values are given to the accuracy determined by uncertainty in $\Delta(\text{g.s.})$ (maximum of three figures after the decimal). The uncertainty is ≤ 9 in the last significant figure. An appended "s" denotes that the value is obtained from systematics.

Column 4, $T_{1/2}$, Γ or Abundance:

The half-life and the abundance (**in bold face**) are shown followed by their units ("% symbol in the case of abundance) which are followed by the uncertainty, in *italics*, in the last significant figure. For example, $8.1 \text{ s } 10$ means $8.1 \pm 1.0 \text{ s}$. For some very short-lived nuclei, level widths rather than half-lives are given. There also, the width is followed by units (e.g., eV, keV, or MeV) which are followed by the uncertainty in *italics*, if known.

Column 5, Decay Mode:

Decay modes are given in decreasing strength from left to right, followed by the percentage branching, if known ("w" indicates a weak branch). The percentage branching is omitted where there is no competing mode of decay or no other mode has been observed.

Explanation of Table (cont.)

The various modes of decay are given below:

| | |
|--------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| β^- | β^- decay |
| ε | ε (electron capture), or $\varepsilon+\beta^+$, or β^+ decay |
| IT | isomeric transition (through γ or conversion-electron decay) |
| n, p, α , ... | neutron, proton, alpha, ... decay |
| SF | spontaneous fission |
| $2\beta^-$, 3α , ... | double β^- decay ($\beta^-\beta^-$), decay through emission of 3 α 's, ... |
| β^-n , β^-p , $\beta^- \alpha$, ... | delayed n, p, α , ... emission following β^- decay |
| εp , $\varepsilon \alpha$, εSF , ... | delayed p, α , SF, ... decay following ε or β^+ decay |

Appendices:

The appendices have been updated to conform to the Fundamental Physical Constants[13]. For properties of the elementary particles and for the astrophysical constants please see the Review of Particle Properties, *Physical Review D* 50, 1173 (1994) and its subsequent biennial updates. See also the World Wide Web at URL: <http://pdg.lbl.gov/>

Acknowledgements

The appendix on Λ hypernucleides has been prepared by R. Chrien, BNL. The author is thankful to many colleagues, especially D. Alburger, R. Casten, R. Chrien, and J. Millener, all at BNL, P. Endt at Utrecht, R. Tilley at TUNL, and G. Audi, O. Bersillon, and J. Blachot in France for many helpful suggestions. Special thanks are due to M. Bhat, T. Burrows, R. Kinsey, and V. McLane for help with scanning recent literature. The help received in production of the booklet from other members of NNDC, particularly, M. Blennau, P. Dixon, Y. Sanborn, and J. Tallarine is gratefully acknowledged. The author is grateful for encouragement and support received from M. Bhat, C. Dunford, and R. Meyer.

This research was supported by the Division of Nuclear Physics, Office of High Energy and Nuclear Physics, US Department of Energy.

Footnotes and References

a) Atomic weights of many elements are not invariant and depend on the origin and treatment of the material. The values given here apply to elements as they exist naturally on earth and are from N. E. Holden, *Handbook of Chemistry and Physics, 76th edition, 1995*. Uncertainty is 1 in last significant figure unless expressly given.

Masses are scaled to 12 for ¹²C.

Parenthetical whole numbers represent the mass numbers (A) of the longest lived isotopes for radioactive elements.

Isotopic masses (and more precise atomic weights for some mono-isotopic elements) may be calculated as $A + (\Delta/931.494)$, where A is the mass number and Δ is the mass excess as given in the *Nuclear Wallet Cards*.

b) C.R. Hammond, in *CRC Handbook of Chemistry and Physics, 75th edition, 1994*, 4-1, 4-122. Where specified, exact temperature and pressure conditions are given; the conditions for all gases have been inferred to be 0 °C and 1 atm. The densities for the following gaseous elements are for diatomic molecules: H, N, O, F, Cl. In general, densities for gases (in g/cc) may be approximated by the formula: $\text{density} = MP/82.05T$, where M is the molecular weight in g, P the pressure in atm, and T the temperature in °K. The reported oxidation states do not include some uncommon states, or those states predicted by periodicity, but not confirmed chemically.

c) At 20 °C.

d) For gas; density (liquid)=0.0708 g/cc at b.p.; density (solid)=0.0706 g/cc at -262 °C.

f) For gas; density (liquid)=0.1221 g/cc at b.p.

e) At 25 °C.

Appendix-I Table of Elemental Properties

- f) For gas; density (liquid)=1.221 g/cc at b.p.
- g) At 1 atm.
- h) For crystal form; density (amorphous)=2.37 g/cc.
- i) For amorphous carbon; density (graphite)=1.9 to 2.3 g/cc; density (gem diamond)=3.513 g/cc at 25 °C; density (other diamond)=3.15 to 3.53 g/cc.
- j) For gas; density (liquid)=0.808 g/cc at b.p.; density (solid)=1.026 g/cc at -252 °C.
- k) For gas; density (liquid)=1.14 g/cc at b.p.
- l) For white phosphorus; density (red)=2.20 g/cc; density (black)=2.25 to 2.69 g/cc.
- m) For rhombic sulfur; melting point (monoclinic)=119.0 °C; density (monoclinic)=1.957 g/cc at 20 °C.
- n) Depending on allotropic form.
- o) For gray arsenic; density (yellow)=1.97 g/cc.
- p) For gray selenium; density (vitreous)=4.28 g/cc.
- q) For gray tin; density (white)=7.13 g/cc.
- r) For α modification.
- s) For β modification.
- t) Calculated.
- u) For liquid at 20 °C; 0.00759 g/cc for gas.
- v) For solid at 20 °C; 0.01127 g/cc for gas.

Appendix-II Frequently-Used Constants

The frequently used constants are given below in familiar units. Only approximate values are given, see App-III for values to current known precision

| Symbol | Constant | Value |
|------------------------------------|-------------------------------------------------|-----------------------------------|
| $1/\alpha=\hbar c/e^2$ | Fine structure constant | 137.0 |
| c | Speed of light in vacuum | 2.998×10^{10} cm/s |
| h | Planck constant | 6.626×10^{-27} erg s |
| $\hbar=h/2\pi$ | | 6.582×10^{-22} MeV s |
| $\hbar c$ | | 197.3 MeV fm |
| $k=R/N_A$ | Boltzmann constant | 8.617×10^{-11} MeV/K |
| $r_e=e^2/m_e c^2$ | Classical e^- radius | 2.818 fm |
| $\lambda_{C,e}=\hbar/m_e c$ | Compton wavelength of e^- | 386.2 fm |
| $\lambda_{C,p}=\hbar/m_p c$ | Compton wavelength of p | 0.210 fm |
| $\lambda_{C,\pi}=\hbar/m_\pi c$ | Compton wavelength of π | 1.414 fm |
| u | Atomic mass unit | 931.5 MeV/c ² |
| m_e | Electron mass | 0.511 MeV/c ² |
| m_n | Neutron mass | 939.6 MeV/c ² |
| m_p | Proton mass | 938.3 MeV/c ² |
| m_d | Deuteron mass | 1875.6 MeV/c ² |
| m_{π^\pm} | π^\pm mass | 139.6 MeV/c ² |
| m_{π^0} | π^0 mass | 135.0 MeV/c ² |
| m_W | W^\pm boson mass | 80.2 GeV/c ² |
| m_Z | Z^0 boson mass | 91.2 GeV/c ² |
| $\mu_N=\hbar e/2m_p c$ | Nuclear magneton | 3.152×10^{-18} MeV/Gauss |
| μ_p | Proton magnetic moment | 2.793 μ_N |
| μ_n | Neutron magnetic moment | 1.913 μ_N |
| <hr/> | | |
| 1 fm= 10^{-13} cm | 1 Å= 10^{-8} cm | $\pi=3.1416$ |
| 1 barn= 10^{-24} cm ² | 1 eV/c ² = 1.783×10^{-33} g | |
| 1 joule= 10^7 erg | 1 coulomb= 2.998×10^9 esu | |
| 1 newton= 10^5 dyne | 1 tesla= 10^4 gauss | |

Appendix-III Fundamental Constants

Unless otherwise noted, the information presented in this table is from *The 1986 Adjustment of the Fundamental Physical Constants*^a. The constants are arranged alphabetically according to the symbols by which they are denoted. The numbers in *italics* are the one-standard-deviation uncertainty in the last digits of the values given. The unified atomic mass scale ($^{12}\text{C}\equiv 12$) has been used throughout. Values are given for both SI and cgs units. In cgs units "permittivity of vacuum" μ_0 and "permeability of vacuum" ϵ_0 are dimensionless unit quantities; in SI units they have the values ^f

$$\begin{aligned}\mu_0 &= 4\pi \times 10^{-7} \text{ m} \cdot \text{kg} \cdot \text{s}^{-2} \cdot \text{A}^{-2} = 4\pi \times 10^{-7} \text{ N} \cdot \text{A}^{-2} = 4\pi \times 10^{-7} \text{ T} \cdot \text{A}^{-1} \\ \epsilon_0 &= 1/\mu_0 c^2\end{aligned}$$

The factor in square brackets given in the definition of a quantity is to be omitted to obtain the expression in cgs units ^f.

The following abbreviations are used:

- A = ampere
- C = coulomb
- cm = centimeter
- emu = electromagnetic unit
- esu = electrostatic unit
- G = gauss
- g = gram
- Hz = hertz = cycles/sec
- J = joule
- K = degree Kelvin
- kg = kilogram
- m = meter
- mol = mole
- N = newton
- s = second
- T = tesla
- u = atomic mass unit (unified scale)
- V = volt
- W = watt
- Wb = Weber

Appendix-IV Energy-Equivalent Factors †

| units | erg | eV | s^{-1} | cm^{-1} |
|-----------|------------------------------|------------------------------|-------------------------------|------------------------------|
| erg | 1.0 | $1.60217733 \times 10^{-12}$ | $6.6260755 \times 10^{-27}$ | $1.9864475 \times 10^{-16}$ |
| eV | 6.2415064×10^{11} | 1.0 | $4.1356692 \times 10^{-15}$ | $1.23984244 \times 10^{-4}$ |
| s^{-1} | $1.50918897 \times 10^{26}$ | $2.41798836 \times 10^{14}$ | 1.0 | $2.99792458 \times 10^{10}$ |
| cm^{-1} | 5.0341125×10^{15} | 8.0655410×10^3 | $3.335640952 \times 10^{-11}$ | 1.0 |
| deg K | 7.242924×10^{15} | 1.160445×10^4 | 4.799216×10^{-11} | 1.438769 |
| g | $1.11265006 \times 10^{-21}$ | $1.78266270 \times 10^{-33}$ | $7.3725032 \times 10^{-48}$ | $2.2102209 \times 10^{-37}$ |
| u | 6.7005308×10^2 | $1.07354385 \times 10^{-9}$ | $4.43982224 \times 10^{-24}$ | $1.33102522 \times 10^{-13}$ |

(1 cal = 4.1840 J, 1 J = 10^7 erg)

Note: In the above table all entries in the same column are equivalent. The various units of energy are connected as follows:

$$1 \text{ erg} = 1/c^2 \text{ g} = 1/(mc^2) \text{ u} = 1/(hc) \text{ cm}^{-1} = 1/h \text{ s}^{-1} = 1/k \text{ } ^\circ\text{K} = 1/e \text{ eV}$$

Examples: $1 \text{ eV} = 1.602 \times 10^{-12} \text{ erg} = 1.073 \times 10^{-9} \text{ u} = 3.829 \times 10^{-20} \text{ cal}$

$$e/h = 2.417 \times 10^{14} \text{ s}^{-1}, e/(hc) = 8.0654 \times 10^3 \text{ cm}^{-1}$$

$$e/c^2 = 1.782 \times 10^{-33} \text{ g}, e/mc^2 = 1.073 \times 10^{-9} \text{ u}$$

$$e/k = 1.160 \times 10^4 \text{ deg K}$$

Appendix-IV Energy-Equivalent Factors †

| units | deg K | g | u |
|-----------|-------------------------------|--------------------------------|--------------------------------|
| erg | 1.380658 12×10^{-16} | 8.987551787 $\times 10^{20}$ | 1.49241909 88×10^{-3} |
| eV | 8.617385 73×10^{-5} | 5.6095862 17×10^{32} | 9.3149432 28×10^8 |
| s^{-1} | 2.083674 18×10^{10} | 1.35639140 81×10^{47} | 2.25234242 40×10^{23} |
| cm^{-1} | 6.950387 59×10^{-1} | 4.5244347 27×10^{36} | 7.51300563 69×10^{12} |
| deg K | 1.0 | 6.509616 55×10^{36} | 1.0809478 91×10^{13} |
| g | 1.536189 13×10^{-37} | 1.0 | 1.6605402 10×10^{-24} |
| u | 9.251140 78×10^{-14} | 6.0221367 36×10^{23} | 1.0 |

Note: In the above table all entries in the same column are equivalent.

Example: $1u \equiv 1.492.. \times 10^{-3} \text{ erg} = 9.314.. \times 10^8 \text{ eV} = 3.567.. \times 10^{-11} \text{ cal}$, etc.

Electronic Nuclear Data Access

Introduction

The National Nuclear Data Center (NNDC) and some other members of the International Nuclear Structure and Decay Data Network (See Appendix VII) and the Nuclear Data Centers Network (See Appendix VIII) provide electronic access to many of the bibliographic and numeric data bases maintained by members of these groups. Access is available by anonymous FTP, terminal (TCP/IP TELNET, DECNET SET HOST, and modem), and the World Wide Web (WWW). Some data bases or programs also are available on CD-ROM and floppy diskettes.

The contents of these various services are changing and growing continually as are the methods of accessing them. Most of the WWW home pages listed below contain current links. If you have problems or questions, please contact the NNDC at **services@bnind2.dne.bnl.gov**.

The data bases and other services maintained by the NNDC, the International Atomic Energy Agency Nuclear Data Section (IAEA NDS), and the OECD Nuclear Energy Agency Data Bank (NEADB) are listed starting on page *ii* followed by the methods of electronic access to these centers. Other members of the International Nuclear Structure and Decay Data Network providing electronic access are listed in alphabetical order starting on page *vi*. Sites for members of other networks providing electronic access are given on the NNDC WWW home page; other WWW sites of interest may be found on most of the home pages listed below.

An abridged, modified set of definitions of terms, acronyms, and abbreviations starts on page *viii*. The original source is

available on the Lund Nuclear Data Services (University of Lund, Sweden) WWW home page. Information on access to the Directory of Nuclear Physics Laboratories and to the DOE's Division of Nuclear Physics is also included on page *xii*.

Data Bases and Services at the NNDC, the IAEA NDS, and the OECD NEADB

The NNDC, NDS, and NEADB mirror the information available at these three centers although there are some differences in the contents and version dates of the data bases. Current major systems common to the three systems are listed below. The centers providing access to this information in various formats are shown in the square brackets following the definitions.

CINDA (*Computer Index of Neutron Data*)—Bibliographic references to data on neutron reactions. [NDS, NEADB, NNDC]

CODES—Includes ENDF pre-processing and utility codes and ENSDF analysis and checking codes. [NDS, NNDC]

CSISRS (*Cross Section Information Storage and Retrieval System*)—Experimental data on nuclear reactions, along with descriptions. This also is known as **EXFOR** (*Exchange Format*). [NDS, NEADB, NNDC]

DOCUMENTATION—Includes the NNDC (NDS) On-line Data Service Manual [NDS, NNDC] and the *Evaluated Nuclear Structure Data File* Manual [NDS, NEADB, NNDC].

ENDF (*Evaluated Nuclear Data File*)—Evaluated data on nuclear reactions and decays. [NDS, NEADB (EVA, JEF), NNDC]

ENSDF (*Evaluated Nuclear Structure Data File*)—Evaluated data on adopted levels and their properties, decay schemes, and nuclear structure information from reactions for all known nuclides. [IP (Isotopes Project), Lund, NDS, NEADB, NNDC]

LIBRARIES—Includes the 1993 Audi-Wapstra Atomic Mass Evaluation [NDS, NEADB, NNDC], and the International Reactor Dosimetry File—1990 (Version 2) [NDS, NNDC]

MIRD—Information on radionuclide decay in the format of the *Medical Internal Radiation Dose* Committee. [Lund, NDS, NNDC]

NSR (*Nuclear Science References*)—Bibliographic information on nuclear structure, nuclear reactions, and radioactive decay; some papers on atomic physics are included that are relevant to the physics of nuclear structure. [IP (Papyrus NSR), Lund (Papyrus NSR), NDS, NEADB, NNDC]

NUDAT (*Nuclear Data File*)—Evaluated nuclear data, including nuclear levels and their properties, nuclear masses, nuclear isomeric properties, radioactive decay radiations, and thermal cross sections and resonance integrals. [NDS, NEADB, NNDC]

PCNUDAT—An MS-DOS clone of NUDAT. [Lund, NNDC]

XRAY (*Photon Attenuation and Scattering*)—Attenuation coefficients and total x-ray cross sections, and scattering cross sections for polarized photons. [NDS, NNDC]

Other information available at the NNDC and NDS includes: the NNDC (NDS) address list and Newsletter; **UTILITIES** to run nuclear physics analyses and Q-value

calculation codes, to plot and display sample retrievals; and **FILES** to view and electronically transfer data files.

**National Nuclear Data Center (NNDC),
Brookhaven National Laboratory, USA**

Anonymous FTP

•**bnlnd2.dne.bnl.gov**. User name: **anonymous**. Password: Your e-mail address.

•**Contents:** Codes, documentation, and libraries as described on pages *ii* through *iv*. Additional contents include MS-DOS versions of the ENSDF analysis and checking codes (including executables), ENSDAT (*Evaluated Nuclear Structure Drawings and Tables*), and PCNUDAT.

Terminal Access

•**TELNET: bnlnd2.dne.bnl.gov (130.199.112.132)**. User name: **NNDC** (no password). At the prompt for assigned authorization code, enter the code or GUEST.

•**DECNET SET HOST: bnlnd2 (44436 or 43.404)**. Remaining dialog as in the TELNET instructions.

•**Modem: 516-282-2002**.

•Protocol: ASCII only. Full duplex.

•Speed: 1200 to 19200 bps. Higher speeds up to 57.6 kbps may be possible if supported by the local modem and software.

•Word: 8-bit, parity off, one stop bit.

•Thor login: **NNDC**. Password: **NNDC**. User name and password must be *capitalized*. See TELNET instructions for authorization code.

•**Contents:** See pages *ii* through *v*.

World Wide Web

•<http://www.dne.bnl.gov/nndc.html>

•**Contents:** General information, Nuclear decay data in the *Medical Internal Radiation Dose* format (MIRD), Codes, documentation, and libraries as described on pages *ii* through *iv*. Mirror site for the Korean Atomic Energy Research Institute's *Table of the Nuclides*.

CD-ROM Distribution

Nuclear Data on CD-ROM (In preparation)—Includes Papyrus NSR and PCNUDAT. Contact: R.R. Kinsey (kinsey1@bnl.gov)

Floppy Disk Distribution

•ENSDF Analysis and Checking Codes for MS-DOS—Contact: T.W. Burrows (nndctb@bnl.gov)

•PCNUDAT (Demonstration version)—Contact: R.R. Kinsey (kinsey1@bnl.gov).

Nuclear Data Section (NDS), IAEA, Austria

Terminal Access

•**TELNET:** [iaeand.iaea.or.at](telnet://iaeand.iaea.or.at). User name: **IAEANDS** (No password). At the prompt for assigned authorization code, enter the code or GUEST.

•**Contents:** See pages *ii* through *v*.

Nuclear Energy Agency Data Bank (NEADB), OECD, France

Terminal Access

•**TELNET:** [db.nea.fr](telnet://db.nea.fr). User name: **NEADB**. No password. At the prompt for assigned authorization code, enter the assigned code or GUEST.

•**Contents:** See next entry.

World Wide Web

•<http://www.nea.fr/html/dbdata/dbdata.html>

•**Contents:** General Information, evaluated nuclear structure data (NSR, ENSDF, NUDAT), evaluated nuclear data files (EVA, JEF), experimental data on nuclear reactions (EXFOR, CINDA, WRENDATA), and the Audi-Wapstra Atomic Mass Evaluations. Most searches and retrievals of the data base are by TELNET connections.

**Center for Nuclear Information
Technology (CNIT), San Jose State Uni-
versity, USA**

•MacNuclide—Contact C.A. Stone
(STONE.C@APPLELINK.APPLE.COM)

**Isotopes Project (IP), E.O. Lawrence
Berkeley National Laboratory, USA**

World Wide Web

•<http://csa5.lbl.gov/~fchu/ip.html>

•**Contents:** General information; ENSDF; EHSDF (*Evaluated High Spin Data File*); EDDF (*Evaluated Decay Data File*); VuENSDF, *Table of Isotopes* (not yet available), Papyrus NSR, and GAMQUEST.

CD-ROM Distribution

Nuclear Data on CD-ROM (In preparation)—Includes Papyrus NSR and PCNUDAT. Contact: E. Browne
(EBROWNE@CSA3.LBL.GOV)

Lund Nuclear Data Services, University of Lund, Sweden

Anonymous FTP

•**OUTIS.LUCAS.LU.SE.** User name: **anonymous**. No password. Directory: /pub/nsr

•**Contents:** Papyrus NSR and updates, PCNUDAT, and VuENSDF

World Wide Web

•**<http://www.fysik.lu.se/NuclearData/>**

•**Contents:** General information, Papyrus NSR, ENSDF Status, PCNUDAT, *Table of Isotopes*, EHSDF and EDDF, MIRD, The Radioactivity Gammas Database, the Nuclear Wallet Cards, VuENSDF, GCORR, Programs for evaluators, Local services and file transfer, Local Area Network services for Sweden. A CD-ROM user interface is planned.

CD-ROM Distribution

Nuclear Data on CD-ROM (In preparation)—Includes Papyrus NSR and PCNUDAT. Contact: L.P. Ekström (**PETER.EKSTROM@NUCLEAR.LU.SE**)

Nuclear Data Evaluation Project, Triangle Universities Nuclear Laboratory, USA

World Wide Web

•**<http://www.tunl.duke.edu/NuclData>**

•**Contents:** Preprints of “Energy Levels of Light Nuclei, A=19” and “Energy Levels of Light Nuclei, A=18”; an abridged version of “Energy Levels of Light Nuclei A=16-17”; a list of preprints and reprints available by standard mail; Energy Level Diagrams for A=4-20 nuclei; and information on A=3-20 nuclei from ENSDF in Postscript.

**Nuclear Data Project (NDP), Oak Ridge
National Laboratory, USA**

World Wide Web

•<http://www.phy.ornl.gov/ndp/ndp.html>

•**Contents:** A description of the project's activities.

**Glossary of Nuclear Data Evaluation and
WWW Jargon**

Following is an abridged, modified version of definitions of terms and abbreviations used by nuclear data evaluators prepared by L.P. Ekström. Some computer terms—relevant to the nuclear structure software—also are included. The original version, including links to more detailed information, is available on the Lund Nuclear Data Services Web home page.

•**Adopted levels, gammas**—In ENSDF, there is an Adopted levels' data set for each known nuclide. It contains adopted properties of levels and gammas. If a nuclide has only one data set, this set is considered as the Adopted levels, gammas data set.

•**Anonymous FTP**—A method of using FTP without having to have an account on the server system. On systems offering an anonymous FTP service, the name "anonymous" and, very often, the more easily spelled "ftp" are recognized and allow access using the user's e-mail address as a password.

•**Band**—In ENSDF and VuENSDF a band is a set of levels that share some nuclear-structure property, *e.g.*, a rotational band, vibrational states or simple shell model configurations. In ENSDF, levels belonging to a band are marked with a BAND comment.

- Browser—A program that sends requests for resources across networks and displays those resources when they are received. Another name for the WWW client program. Examples are Mosaic and Netscape.
- CINDA—See pages *ii* through *iv*.
- Client—A computer program which by some communication protocol is in contact with a server program.
- Client-server or Client-server architecture—A basic idea used in computer networking, wherein servers retrieve information requested by clients, and clients display that information to the user. On the WWW, the client is a WWW browser program. The server is a special program running on any computer on the Internet.
- COMTRANS—A computer program, written at the NNDC, to translate ENSDF comments (using the ENSDF dictionary into an extended-code character set).
- CSISRS—See pages *ii* through *iv*.
- Data set—ENSDF is divided into several data sets. A data set either contains adopted properties (the Adopted levels, gammas data set), data from a radioactive decay (decay data sets), or from a nuclear reaction (reaction data sets).
- EDDF—Evaluated Decay Data File - A computer file (based on ENSDF) with the decay data used for generating the *Table of Isotopes*.
- EHSDF—Evaluated High Spin Data File - A computer file (based on ENSDF) with the high-spin data used for the generating the *Table of Isotopes*.
- ENDF—See pages *ii* through *iv*.
- ENDF format—An internationally accepted format for exchanging evaluated files of nuclear reaction and decay data. ENDF-6 is the latest version.
- ENSDF—See pages *ii* through *iv*.

- ENSDF/2 Format—A modified version of the ENSDF format. The main difference between this and the original is that all levels are labeled, and transitions between levels are defined unambiguously with these labels.
- ENSDF Dictionary—A translation table to convert 7 bit ASCII text from ENSDF comments into an extended character set containing Greek letters, superscripts, and subscripts.
- FMTCHK—ForMaT CHeCK - A computer program used by evaluators to check that data sets comply with the ENSDF format.
- FTP—File Transfer Protocol. A standard Internet protocol that allows files to be transmitted from one computer to another across a network.
- GIF—Graphics Interchange Format. A standard graphics-file format developed by CompuServe, Inc.
- Host—A computer attached to the Internet.
- HTML—HyperText Markup Language. The markup language used for WWW documents.
- HTTP—HyperText Transfer Protocol. The Internet protocol that is used to allow WWW clients to retrieve information from WWW servers.
- IP address—Internet Protocol address. A standardized method of identifying a particular computer connected to a network. The IP address is expressed as four numbers less than 256, separated by periods. It provides a unique identifier for every computer connected to the network.
- JPEG—Joint Photographic Experts Group; also refers to the graphics-file format developed by that body.
- Mass chain—The collection of data sets in ENSDF containing information on nuclides with a particular mass number.
- MASSES—Files containing information on atomic masses provided by G. Audi and A. Wapstra. These tables are published in Nuclear Physics A.

- MIME type—Multipurpose Internet Mail Extensions type—a piece of information on the type of file that is transferred from a server to a client.
- Mosaic—A free program from NCSA used for browsing the World Wide Web.
- Netscape—A program from Netscape Communications used for browsing the World Wide Web.
- NSR—See pages *ii* through *iv*.
- NUDAT—See pages *ii* through *iv*.
- PCNUDAT—See pages *ii* through *iv*.
- PDF—Portable Document Format. A format defined by Adobe, Inc. for platform-independent documents. To read files in PDF format a free Acrobat Reader is required for the computer used.
- Server—A program that responds to requests from a client program. The term also is used to refer to the computer system on which the server program runs.
- TELNET—A standard Internet protocol providing a remote login service.
- URL—Uniform Resource Locator. The current addressing scheme for resources on the WWW. The URL gives the location of a particular copy of a resource.
- VuENSDF—A computer code for displaying decay scheme drawings and tabular listings of nuclear structure and decay data from ENSDF. VuENSDF is written at the Isotopes Project.
- Viewer-application (also, a helper-application)—A program used by Mosaic or Netscape to handle specialized file formats.
- XRAY—See pages *ii* through *iv*.

Directory of Nuclear Physics Laboratories, 6th Edition

A new version of the Directory of Nuclear Physics Laboratories is being prepared at the National Superconducting Cyclotron Laboratory (NSCL), Michigan State University, under the sponsorship of the Division of Nuclear Physics, American Physical Society (APS). The current (5th) edition will be placed on the WWW by October 1, 1995. Suggestions for new or changed listings should be sent to Shari Conroy, Cyclotron Laboratory, Michigan State University, East Lansing MI 48824 (conroy@nscl.msu.edu). The directory will appear on the World Wide Web with pointers to it on the Division's home page found on the APS home page (<http://aps.org>) and on the NSCL home page (<http://pads1.pa.msu.edu/nuclear/NSCL.htm>).

Division of Nuclear Physics, US Department of Energy

The Division of Nuclear Physics supports a broad program of basic research in nuclear physics. At the Division's World Wide Web site: (<http://www.er.doe.gov/production/henp/nucphys.html>) will be found an overview of its research program, programmatic activities, links to research facilities at universities and national laboratories, links to some major experiments, and links to research publications. One of the Division's sub-programs, Low Energy Nuclear Physics, supports information services on critical nuclear data, and the compilation and dissemination of accurate and complete nuclear data information that is readily accessible and user oriented.
